

[Elektradrive](#) are proud to announce a brand new release for their debut album "[Over the Space](#)", out for the first time in 1986 and now re-published through Escape Music with the new title "**30th Anniversary Edition**".

The album has been fully remastered by *Simone Falovo* and will contain 5 bonus tracks too, such as the single debut "[Let it survive/Brainstorm](#)" (1984) and other songs taken from demo-tapes of the *Overdrive's* period (83-84).

Thanks to the great originality in the style of their first album - and before of the AOR turn of the next ones - the band was labeled by many writers - famous Beppe Riva among them - as *Space Metal Band*, while *Dave Reynolds* reviewed the album on the legendary English magazine *Metal Forces* with an extraordinary 90/100.

Elektradrive made 4 studio albums, the last one in 2009: [Living 4](#).
